

DarkField Microscopy

According to Dr. Professor Günther Enderlein Made Easy

*This interactive teaching CD is the No. 1 reference in
Live Blood Analysis in DarkField according to Professor Enderlein today.*

*It is not a lecture on a DVD but allows students to choose the topic they want to study in the comfort of their own home.
Over 100 DarkField microscopy movie clips ensure real time study and experience.*

2nd edition of DarkField microscopy training course on CD now also available in French.

It was translated by Michele Vermeir who fully understands the subject.

***Dr. Hilber Seeger, M.D., Ph.D. has created a DarkField training course for health care professionals
interested in this very unique technique looking at live blood.***

The CD was created in scientific fashion by comparing appearances of blood cells in hematological blood smears in bright field to those in DarkField.

Samples examined in DarkField are live blood cells and shown as movie clips on the CD.

Examples of DarkField movies from the interactive training CD can be watched on Dr. Hilbert Seeger's website www.darkfieldtraining.com.
